

BULLDOG 3518D SEWER JETTER 350 GALLON

Introducing the Bulldog Jetter from John Bean Sprayers

As a result of increased interest from the contractor/plumbing drain cleaner market, John Bean Sprayers has developed the Bulldog Jetter, a small, yet powerful machine that encompasses the true legacy of John Bean Sprayers: simplicity, durability and functionality. The Bulldog has new world technology, while remaining extremely simple and efficient to operate. The Jetter incorporates all the features professional drain cleaners of today want and need. Wireless remote control capability, jet pulsation, anti-freeze circulation, mini-jet system with quick release mount and a Udor 18gpm@4000psi Run-Dry pump. Two optional lockable tool/accessory storage boxes provide security, weather protection and easy operator access. Hydraulically driven hose reel mounted on a bearing system provides user easy access to the line to be cleaned regardless of how the vehicle is parked. A 2-1/2" water fill system with air gap allows for quick hydrant filling while protecting the portable water supply. The Bulldog comes standard with a 2-5/16" ball hitch, with an optional pintle hitch available. Electric brakes with an emergency activation system are standard. An electronic safety strobe light provides safety illumination and is provided as standard equipment. With two different tank choices, a 350 gallon or 700 gallon black polyethylene tank(s), the Bulldog meets all your jetting requirements.

The Bulldog Jetter is relentless in any job it encounters. Small, durable and powerful, the Bulldog is a sound investment for contractors and municipalities alike. For more information, call Andrew Tripp at 706-882-8161 ext. 152.
